

a

The posterior climbs steadily

**b**

Median and IQR

The eventual label is the read-out's call after all ten rounds; a traces the mean posterior it assigned to that same label after each prefix, and the quartiles are in T_FR31. The mean never reaches the 0.90 floor, but the median game crosses it by round 2-4 (b) -- the average is held down by the fifth of games that never cross at all, which are the abstention set mined in FR25.
