

One point per dyad in a (2,400 dyads), jittered by 0.07 units so overlapping dyads stay visible. The dashed line is every split of the 10 units an anti-coordinated round pays; mutual cooperation sits above it at a total of 4, the Nash point far below at 12. The percentage above each violin in b is the share of dyads whose two agents earned within 0.05 of each other.
