

a Stage game (one round)

		<i>opponent</i>	
		Option B cooperate	Option A defect
<i>focal player</i>	Option B cooperate	2, 2 CC	10, 0 CD
	Option A defect	0, 10 DC	6, 6 DD

cells are **penalties** to be minimised: $T < R < P < S$ greed = 0.20 fear = 0.40

shown at $\lambda = 1$; every cell is multiplied by $\lambda \in \{0.1, 1, 10\}$, which leaves the game unchanged

b
