

a

Stage game

		opponent	
		Option B cooperate	Option A defect
focal player	Option B cooperate	2, 2 CC	10, 0 CD
	Option A defect	0, 10 DC	6, 6 DD

cells are **penalties** to be minimised: $T < R < P < S$; greed = 0.20, fear = 0.40

shown at $\lambda = 1$; every cell is multiplied by $\lambda \in \{0.1, 1, 10\}$

b

Crossed design

model	Claude	Gemini	GPT-4o	Mistral	×4	
horizon	hidden	known	hidden	hidden	confound	
payoff scale λ	×0.1	×1	×10		×3	
language	EN	FR	VI	ZH	AR	×5
persona pairing	C-C	C-S	S-C	S-S		×4
replicate						×10

2,400 dyads × 2 seats = 4,800 agent-games

10 rounds each = 48,000 decisions

c

Strategy read-out

of all 4,800 agent-games. The first two steps involve no learning; the last two are mined in figures 5 and 6.
